FUND MANAGER'S COMMENTS

2022 is a very positive year for the strategy in which the differentiated Quality Core approach stood out significantly when compared with many sustainable peers that struggled with growth underperformance headwinds. Having rallied strongly through November the market consolidated into year-end as despite encouraging inflation data both the Federal Reserve and the European Central Bank remained hawkish suggesting that investors had gotten too far ahead of reality with regards to when they might be able to ease off the brakes and the market also shifted to focusing more on the potential for earnings downgrades in 2023 as the global economy shifts into some form of recession. Over the month outperformance was driven primarily by stock selection which was particularly strong in Financials, Healthcare and Technology.

Impact Focus of the month: Over the course of the year the team have been engaging with those companies in the portfolio that have not set, or committed to set, Science Based Target Initiative (SBTi) approved emissions targets. We were delighted to learn that our US Utility holding Eversource has committed to setting targets. Eversource was initially hesitant about committing to setting targets (due to difficulties associated with measuring its complex emissions profile) however through engaging with the company and connecting the company with CDP, Eversource were encouraged to hire consultants to assess the feasibility of setting targets and ultimately fully committed to doing so. We believe this is a great example of engagement for actual impact and we plan to work with both Eversource and other holdings to push them to commit to SBTi's and learn from Eversource's journey.

Top contributors to performance were Novo Nordisk (+10%) and AiA (+11%). Novo Nordisk rallied on positive news that it believes it has finally managed to get on top of its supply chain issues for its obesity treatment Wegovy whilst AiA benefitted from China stepping away from its zero COVID policy and signalling intent to fully reopen. Top detractors were Alphabet (-13%) and Tesla (-37%). Tesla in particular has suffered from increasingly negative news flow with regards to waiting times coming down rapidly, price cuts and factory shutdowns, which suggests more typical auto demand effects could finally be catching up with the company at a time in which it is aggressively ramping up capacity. Whilst very disappointing the negative impact of Tesla's fall from grace has been limited by very prudent position sizing.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund, e.g. investment decisions undertaken by Nomura as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.
Concentration risk	As the target fund invests at least 80% of its NAV in the master fund, it is subject to concentration risk as the performance of the target fund would be dependent on the performance of the master fund.
Country risk	The investment of the target fund may be affected by risk specific to the country which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country which the target fund invests in, i.e. Ireland, the domicile country of the master fund.

RISKS (CONTINUED)

Default risk

Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in liquid assets which include but are not limited to deposits and money market instruments.

Investment manager of the master fund risk

The target fund will invest in the master fund managed by a foreign asset management company. This risk refers to the risk associated with the investment manager, which include:

- i) The risk of non-adherence to the investment objective, strategy and policies of the master fund;
- ii) The risk of direct or indirect losses resulting from inadequate or failed operational and administrative processes and systems by the investment manager; and
- iii) The risk that the master fund may underperform its benchmark due to poor investment decisions by the investment manager.
