FUND MANAGER'S COMMENTS

Developed markets experienced a heavy sell-off at the beginning of 2022 after the Fed shifted to a more hawkish stance to tighten monetary policy. S&P 500, MSCI Europe and MSCI Japan declined by 7.2%, 4% and 6% respectively in local currency terms. Growth stocks with expensive valuations have underperformed value stocks on higher US Treasury yield. The US Dollar appreciated by 0.9% MTD. Euro depreciated by 1.2% and Japanese Yen was flat. US 10-year bond yield has risen to 1.9% at the time of writing.

With global inflation shown to be more persistent, central banks have turned more hawkish than expected in winding down asset purchase and hiking interest rates. Concerns on how fast the US Fed will raise rates and when the quantitative tightening will occur have weighed on markets in January. Against this backdrop, 2022 GDP growth has been revised higher and is expected to stay above trend for US and Europe. Low unemployment rate, record high job openings and higher wage growth all point to a strong labor market in US. If the Omicron wave retreats eventually, we expect consumer demand to rebound and pressure on global supply chains to recede. In the short-term, there is pressure on bond yield to move higher from more hawkish central banks. We have reduced our exposure to expensive growth stocks across all developed markets. On an overall basis, we maintain a neutral allocation to all developed markets with slightly higher allocation Europe because it has a bigger exposure to financial stocks that will benefit in a rate hiking cycle.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
