PERFORMANCE RECORD

The Fund feeds into Affin Hwang Select Asia (ex Japan) Quantum Fund (“target fund”) with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 31 March 2022:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
Fund*	-5.55	1.50	-9.56	-10.82	43.45	17.59	64.69
Benchmark	-5.99	1.52	-4.49	2.27	35.16	24.37	66.64

FUND MANAGER'S COMMENTS

- US equities edged higher as markets kept a watchful eye over a key recession gauge as well as geopolitical developments between Russia and Ukraine. The S&P 500 index rose 3.6%, while the Nasdaq index gained 3.4% in March.
- The MSCI Asia ex-Japan fell 2.9% as China swung between gains and losses in a volatile March. After facing losses throughout the year, China's equity indices rebounded higher after policymakers pledged to ensure market stability.
- Policymakers also signalled an easing of its crackdown on tech companies as well as address delisting fears of US-listed Chinese companies. In a positive move, Beijing changed its law to allow foreign auditors to access financial information of such companies.
- Meanwhile, China announced movement restrictions in several provinces to contain a surge of new COVID cases including Shanghai and Shenzhen. China enforces a strict "COVID-zero" strategy to contain infections through swift lockdowns, travel restrictions and mass testing.
- Several countries in the region Covid restrictions, including Indonesia which lifted all quarantine rules for fully vaccinated visitors, while Thailand eased travel requirements for fully vaccinated foreign visitors.

STRATEGY:

- Markets have been staging a rebound despite expectations of faster Fed rate hikes. This could be due to bearish positioning and supposedly progress being made in the Russia-Ukraine crisis.
- Macro fundamentals remain challenging i.e., rising rates, slowing growth and waning earnings expectations. Valuations are more palatable now, but earnings are still being revised lower.
- We would continue to seek and hold stocks with the Quality Growth at Reasonable Price characteristic. These stocks offer an ideal balance of long term growth prospects, thematic relevance and digestible valuations, though there may be short-term headwinds from the transitions mentioned above.
- The fund's invested level is now at 85%, with the intention to maintain some buffer with higher cash levels as the Fund stays defensive. We exited all holdings in REITs, an Indian cinema chain (due to valuations), and several Malaysian names. New positions initiated include several reopening beneficiaries in China and Korea.
- Structural growth names and economic reopening themes make up bulk of the fund, while cyclicals exposure is kept at around 20-25% of the fund.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
