FUND MANAGER'S COMMENTS

The benchmark KLCI ended 1.91% lower due to a ringgit weakness.

- Politics dominated the month as recent by-elections for the Pulai parliamentary seat and Simpang Jeram state seat in Johor concluded with the Pakatan Harapan-Barisan Nasional (PH-BN) coalition defending both seats.
- With politics at a status quo and appearing more settled now, we could see renewed focus by the government on implementing policy reforms. All eyes will be on Budget 2024 scheduled for tabling in Parliament on October 13. Expectations are high for fiscal reform measures, including targeted fuel subsidies and stimulus packages for significant infrastructure projects. We could also see more granular details on policy frameworks previously announced such as the National Energy Transition Roadmap (NETR) and the New Industrial Master Plan (NIMP).
- Prime Minister Datuk Seri Anwar Ibrahim recently presented the Mid-Term Review (MTR) of the 12th Malaysia Plan (12MP) in the Dewan Rakyat. Key highlights of the 12MP MTR include the government committing to allocate a minimum of RM90 billion per year for development expenditure. Additionally, Anwar who is also Finance Minister alluded to new measures to widen the tax base including a capital gains tax. However, further details are only expected during the tabling of Budget 2024 in October. Initial indications suggest that the capital gains tax might be applicable primarily to the sale of unlisted shares. In his second state visit to China, Prime Minister Anwar Ibrahim witnessed the signing of three Memoranda of Understanding (MoUs) worth nearly RM20 billion. This is on top of the RM160 billion agreements inked back in April this year. Notably, Citaglobal Bhd and Shanghai Sus Environment sealed a MoU to jointly explore the development of waste-to-energy power plants in Malaysia
- Notable news during the month centered around Prime Minister Datuk Seri Anwar Ibrahim's official visit to the US. Anwar who is also Finance Minister engaged in discussions with several investors and representatives from Fortune 500 companies. Channel checks indicate that the meetings ended on a positive sentiment overall, underscoring warming relations between the US and Malaysia for trade as well as investment activities. With robust policy framework and execution, the outcome of these meetings could translate into fund inflows and a boost in foreign direct investments (FDIs) into Malaysia.

STRATEGY:

- Sentiment for the domestic market remains optimistic as supportive investment themes continue to emerge. These include the National Energy Transition Roadmap, M&A exercises, and FDI news flow. However, we are neutral on the market as macro headwinds persist, particularly from China as it struggles with its post-lockdown recovery.
- The fund continues to maintain its defensive positioning on the back of more challenging macroeconomic conditions. The portfolio will maintain its cash levels at around 10 – 15% as we monitor the announcements in the upcoming Budget 2024, scheduled to be tabled in October.
- Transaction wise, the fund was a net buyer in September, adding more into existing positions. Most notably we added equities in Telco, Utilities and Healthcare sectors, while taking profit on Technology, Oil & Gas and Consumer sectors.
- We intend to increase invested levels moving forward – opportunistically, focusing on key themes such as Renewable Energy, Income and Property in line with recently launched policy framework such as NETR and NIMP.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
Fund management risk	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Performance risk	There is no guarantee in relation to the investment returns.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Liquidity risk	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Equity investment risk	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
