#### FUND MANAGER'S COMMENTS

- The IMF expects a soft landing for the global economy in 2024, with a growth forecast of 3.1%, the same as in 2023, before rising modestly to 3.2% in 2025. The outlook has been revised upwards due to resilience in the US and several large emerging markets, along with fiscal support in China.
- The FOMC left the target range for the federal funds rate unchanged at its January 2024 meeting. The statement suggests a better balance in risks to employment and inflation goals. The FOMC does not expect a rate reduction until there is greater confidence in inflation moving sustainably toward 2%.
- Central bank announcements, such as the US Federal Reserve's decision to leave interest rates unchanged, had an impact on fixed income markets. Additionally, signals from central banks regarding potential policy shifts, such as the Bank of Japan's preparation to end yield-curve control, At the last meeting on 22 January 2024 and 23 January 2024, the BOJ kept its short-term rate at -0.1% and the target for the 10-year Japanese Government Bonds yield at 0% with an upper bound of 1.0%.
- Geopolitical tensions and concerns over inflationary pressures contributed to market volatility. Events such as the conflict in Ukraine and rising commodity prices affected investor confidence and bond yields.
- Market volatility remains elevated due to aggressive monetary tightening cycles and heavy election calendars globally. Tightening policies have started impacting the global economy, leading to lower consumer demand and higher input costs. The outlook suggests caution amid rising volatility, with emphasis on quality names and structural shift

#### STRATEGY:

- Lengthening duration in view of weakening growth environment and as global rate hike cycle come to a halt.
- Bond valuations have become attractive after sharp adjustment in rates. Front end of US Treasuries are attractive at 5%. We also like high quality Investment Grade names for longer term carry.
- Underweight High Yield as we expect a slowdown in global growth could lead to more liquidity and credit rating downgrade pressures.
- Close to zero exposure in China property sector as recovery expected to be slow, liquidity and funding condition remain challenging.
- To gradually reduce Ringgit exposure and explore opportunity in the foreign space to increase the portfolio yield to above 6% level.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Liquidity risk</b>	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
<b>Credit and default risk</b>	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
<b>Interest rate risk</b>	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
<b>Currency risk</b>	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

### Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
