FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 2.83% during the month of April 2021, outperforming the benchmark by 24bps.

S&P 500 rose with strong corporate earnings season, economic data releases and continued fast vaccine roll-out. President Biden announce \$2.25trn American Jobs Plan and \$1.8trn American Families Plan to boost economic growth beyond COVID-19 pandemic, create jobs and expand social safety net. MSCI Europe rose as vaccination speed picked up and some countries started to ease restrictions. MSCI Japan declined as a new wave of rising infections triggered a third state of emergency for Tokyo, Osaka, Kyoto and Hyogo. US Core PCE Price Index YoY reached to 1.8%. 10-year US treasury yield moderated to 1.615%.

Developed markets manufacturing PMIs reached new highs on stronger global demand as economic activities recover. Europe and Japan manufacturing PMIs show resilience against the recent COVID-19 restrictions. The 12m forward earnings are revised higher for all developed markets led by US and Europe. The Federal Reserve has reiterated its stance to not to raise rates before 2024 until the full employment and inflation target is achieved. We expect developed markets central banks to maintain their extremely easy policy stance as we think the rising inflation to be non-sustainable with a still large output gap and high unemployment rate. Valuations are not stretched overall after the recent market correction.

We maintain overweight in all developed markets as we think the global economy should continue its recovery over the next 12 months with the continued rollout of vaccines and fiscal & monetary policy support. Despite the rising inflation expectations in the near term, we think central banks will stay accommodative until the economy recovery trajectory is ensured, full employment and inflation target is achieved. We are positive on US because the rapid vaccine rollout helps economic activities and employment to recover faster from the pandemic. We think the rising infections in Japan could be eventually brought under control if government is on track to speed up the vaccination and approve more vaccines with large-scale centers scheduled to open from May. We upgrade Europe to slight overweight because the vaccination speed starts to catch up with UK, rising infections are coming down and some countries start to loosen restrictions for eventual reopening in summer, which will drive consumer spending, corporate profits and economic recovery.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
