## FUND MANAGER'S COMMENTS

- The broad Asian credit space stayed resilient amid continued stability in treasury yields. Despite some volatility at the start of the month, demand for Asian HY were particularly evident as credit spreads tightened whereas the IG segment lagged towards month end. Asian credits continued to see inflows over the month.
- In the April FOMC meeting, the Fed reassured markets that it will keep rates near zero despite acknowledging a strengthening economy, citing transitory inflation. As expected, they left the fed funds rate unchanged at 0% to 0.25% and left its asset purchases at USD120bil a month.
- Focus of the secondary market were mainly on China Huarong Asset Management. The majority state-owned company fell under pressure following a delay in the release of its FY2020 earnings results and talks that it would undergo restructuring and recapitalisation.
- Indonesia's central bank left its benchmark interest rate unchanged, and cut its outlook for economic growth. Australia's central bank also kept its key policy instruments unchanged following the cooling of a global bond selloff and as the impact of record-low interest rates on asset markets comes into focus.

**STRATEGY:** Major central banks are unlikely to raise rates anytime soon as recent resurgence in Covid-19 cases and slower than expected pace of vaccinations continue to linger.

- Inflation will likely be transitory from a low base effect, however, we believe major central banks would take a wait-and-see approach and see sustainability of economic data in decision to taper.
- We continue to like selective solid HY names, primarily Chinese properties and bank capitals that are still providing a decent buffer against the rise in yields.
- We continue to favor quality names with a tilt towards the IG segment. The breakdown of IG versus HY and unrated bonds are 61% and 14% respectively. Focus will be on credit selection with government bonds to provide liquidity for trading opportunities.
- Cash level is at about 8% now. We will look to deploy capital into papers that have become more attractive following the recent bond sell off.
- Duration remained at around 5.1 years with portfolio yield at 3.5%.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Liquidity risk</b>	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
<b>Credit and default risk</b>	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
<b>Interest rate risk</b>	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
<b>Currency risk</b>	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

### Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
