FUND MANAGER'S COMMENTS

- US Fed Chair, Jerome Powell testified in the House of Representatives to reiterate the central bank's view that inflation is transitory and that the FOMC will not rush to hike rates before signs of a recovery are seen. The yield on the 10-year Treasury note tumbled to close at 1.47% at the end of the month.
- Performance of Asian credits were mixed with the IG segment seeing spreads slightly tighten, though the HY segment saw notable spread widening, dragged down by the Chinese property sector.
- Moody's downgraded China Evergrande to B3, mirroring Fitch's action the week before. This continued to weigh on the sector and spilled over to high beta names.
- President Biden's executive order would see the removal of several Chinese corporates from the original sanction list. ChemChina's bonds reacted the most where the curve tightened by more than 50bps.
- Bank Indonesia left interest rate unchanged at a record low of 3.5%, sustaining its support for a pandemic-hit economy. The Philippine central bank held its key interest rate at 2%, pledging to keep policy loose as long as necessary to support a recovery it sees as tentative.

STRATEGY:

- Major central banks are unlikely to raise rates anytime soon due to uneven and uncertain recovery post Covid-19 and abundant global liquidity.
- Inflation will likely be transitory from a low base effect. However, we believe major central banks would take a wait-and-see approach to monitor sustainability of economic data and the inflation trend amidst downside risks. Nevertheless, monetary policy normalization could take place as early in 2022 as global growth is expected to improve due to the ramp up of global vaccination.
- We continue to like selective solid HY names, primarily Chinese properties and banks for better yields. We will also gradually add RMB and IDR bonds for yield pick-up.
- We continue to favor quality names with a tilt towards the IG segment. The breakdown of IG versus HY and unrated bonds are 63% and 13% respectively. Focus will be on credit selection with government bonds to provide liquidity for trading opportunities.
- Cash level is at about 8% now. Duration remained at around 5.0 years for better yield, though we remain cautious to not extend this to a longer duration positioning. Fixed income yield is at 3.5%.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Structured products risk	The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.
Country risk	Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Regulatory risk	The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
