FUND MANAGER'S COMMENTS

- Global equities ended March higher despite US-China tensions. The MSCI AC World Index was up 2.7%, supported by rising US markets with the S&P 500 index 4.4% higher, as the latest US labour data showed signs of a rebound.
- The MSCI Asia ex-Japan index fell 2.5% in March as increased regulatory scrutiny led to a selloff in Chinese technology stocks. The Hong Kong Hang Seng index dropped 1.8% during the month. China's market regulator imposed a fine of CNY500,000 each on 12 companies including Baidu and Tencent) related to deals that violated anti-monopoly rules.
- At its NPC session in March, China announced a GDP growth target of over 6.0% for 2021. In terms of stimulus, policy makers maintained a relatively looser fiscal policy stance against expectations of possible tightening. The official fiscal deficit figure was set at 3.2% of GDP, compared to 3.6% last year.
- An index of business sentiment among manufacturers in South Korea climbed to 91 in April from 85, for its highest reading since 2011. The improvement was broad-based, with separate gauges for domestic firms and exporters rising at a similar pace, and sentiment for small companies increasing even more than for exporters.
- The local market was relatively muted with the benchmark KLCI up 1.0% in March. A lack of fresh catalysts coupled with political uncertainty led to muted trading volumes.

STRATEGY: We remain constructive on equities on the expectations that global growth would continue on its recovery path in 2021, with continued accommodative policies, positive earnings revision and encouraging vaccine developments.

- Equity markets will continue to be dictated by movements in bond yields in the near term. The sustainability of the value rotation will hinge upon bond yields, which could move higher as inflation expectations rise.
- Some headwinds are emerging e.g. rise in new Covid cases and geopolitical noise. Asian markets also face headwinds from a rebound in USD and China's tightening.
- We continue to be positioned in secular growth stocks but are marginally shifting to value names. We look to have a balanced exposure to companies that can grow structurally post vaccine and to reopening plays and cyclicals.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
