FUND MANAGER’S COMMENTS

In May, the Fund dropped 0.61% outperforming the benchmark by 0.21ppt led by India, Indonesia, Hong Kong SAR while China, Malaysia and Singapore lagged. YTD, the fund still outperformed the benchmark by 0.43ppt.

Rising Covid-19 infections has been a headwind for Asian markets as we saw the resurgence of new cases. However, in India, the situation improved. Where in April, we saw cases exceeding last year’s peak, we saw a decline in cases/day in May to 200,000. Across Asia, countries are stepping up on vaccination programs and are better equipped, hence the impact of Covid is not expected to be as significant as the year before. While global inflation has risen due to higher input prices from raw materials and energy, as well as cost pressures from a global component parts shortage, we remain of the view that the rise in inflation is transitory. The US labour market is tightening as victory over Covid gets nearer however and we continue to keep a close watch on developments.

We are positive on Asian equities over a 12-month horizon. We have broadened out our portfolio into industrials and materials and have recently added back to India equities as we saw an improvement in the Covid situation in the country. Off-benchmark stocks contribute ~40% to our portfolio holdings.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by Principal, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Reclassification of Shariah status risk	This risk refers to the risk that the currently held Shariah-compliant securities in the target fund may be reclassified as Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), Shariah adviser of the issuer, the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Principal will take the necessary steps to dispose of such securities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess gains derived from the disposal of the Shariah non-compliant securities. In the event that the Shariah non-compliant securities are disposed of at a price lower than the investment cost, it may adversely affect the value of the target fund. Thus, it may cause the NAV of the target fund or price of units to fall.
Risk associated with investing in Islamic CIS	Since the target fund will invest entirely into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.
Country risk	The target fund may invest into Islamic CIS which can be domiciled in various countries. Therefore, the target fund will be subjected to risks specific to the countries in which the Islamic CIS are domiciled. Such risks include adverse changes in economic fundamentals, social and political stability, laws and regulations and foreign investments policies. These factors may have an adverse impact on the price of the Islamic CIS, which will depress the Islamic CIS's NAV growth, and consequently depress the target fund's NAV growth.

RISKS

Currency risk

As the target fund may invest into Islamic CIS denominated in currencies other than MYR, any fluctuation in the exchange rate between MYR and the currencies in which the Islamic CIS are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the target fund.
