FUND MANAGER'S COMMENTS

- Global equities rose in October, with the MSCI AC World index up 5.1% supported by strong US equity performance, which saw the S&P 500 hit fresh all time highs. Market sentiment was fueled by robust 3Q 2021 earnings result which had beat expectations.
- The MSCI AC Asia ex-Japan index edged 1.4% higher, lagging behind gains in developed markets. Regulatory noise from China continue to unnerve investors, though the government sought to soothe fears stemming from the property sector as well as spill-over effects from Evergrande's debt saga.
- China's economy grew at a slower pace of 4.9% y-o-y in 3Q, easing from the 7.9% y-o-y growth in 2Q as new wave of Covid-19 outbreak took a toll on the already fragile recovery made worse by bottlenecks in the global supply chain.
- The Chinese government reassured investors that the government will not further tighten measures in the property space, and further added that steady economic growth will remain a key goal.
- South Korea's economic expansion cooled last quarter as a renewed virus outbreak prompted authorities to impose their toughest social distancing restrictions to date. GDP gained 0.3% in the July-to-September period, decelerating from 0.8% in 2Q21.

STRATEGY:

- Global growth momentum is easing and downside risk has increased, accentuated by an energy crisis. With tapering around the corner, markets will be volatile although a repeat of 2013 Taper Tantrum is unlikely.
- Valuations for Asian markets are now more palatable and sentiments are less exuberant. However, we remain cautious given the headwinds may not be fully priced in yet.
- The fund's invested level is now at 90%, as we added to some structural growth names. We have also been streamlining the portfolio positioning by adding weight to several existing holdings while exiting lower conviction names.
- New names added include an Australian zero carbon lithium developer and a Korean battery copper foil maker. We exited a Chinese furniture automation equipment maker given deteriorating business outlook and a Singapore EMS player due to poor management execution.
- Structural growth names and economic reopening themes make up bulk of the fund, while cyclicals exposure has been reduced to around 10% of the fund.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
