FUND MANAGER'S COMMENTS

Market Review

Malaysia's economy remained resilient in August, with 2Q2026 GDP growth accelerating to 6.0% YoY, supported by strong exports, steady private consumption, and continued investment activity. Inflation stayed well contained, with both headline and core inflation easing to 1.8% YoY in July, while the unemployment rate remained stable at 3.0%. Trade performance was particularly strong, with exports surging 38% YoY on robust demand for E&E products and machinery, resulting in a wider trade surplus.

On the policy front, BNM kept the OPR unchanged at 2.75% as expected. While the central bank remains supportive of growth, the latest MPC statement carried a slightly more hawkish tone, highlighting potential cost pressures and remaining vigilant on inflation risks. Meanwhile, geopolitical tensions in the Middle East and uncertainties surrounding global trade conditions continue to pose risks to market sentiment and inflation expectations.

Outlook & Strategy

We expect BNM to keep the OPR unchanged at 2.75%, supported by resilient growth and contained inflation. While the recent MPC statement was somewhat more hawkish, we view it as preserving policy flexibility rather than signaling an imminent rate hike.

While the recent sell-off has made government bond yields increasingly attractive, we remain cautious given the elevated level of market volatility and uncertainty surrounding yield movements. In the credit space, the secondary market continues to undergo significant repricing, resulting in more compelling valuations across a range of issuers. At the same time, we are seeking wider spreads in both the secondary and primary markets to ensure adequate compensation for the heightened volatility in underlying government bond yields. Overall, we believe a patient and disciplined approach remains appropriate at this stage. As market conditions begin to stabilise and pricing becomes more orderly, we will look to gradually increase exposure to attractive opportunities to enhance the portfolio's yield and long-term return potential.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include: • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks Securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the securities of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.
Interest rate risk	Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.
Liquidity risk	Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.
Company or security specific risk	There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.
Credit risk	Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.
