FUND MANAGER'S COMMENTS

- In February 2025, US Treasury (UST) yields declined by 21–33 basis points (bps) month-on-month, as weaker-than-expected economic data fueled concerns about the economy. Despite strong employment and inflation figures, disappointing retail sales, a sharp decline in Services PMI, weaker-than-expected Non-Farm Payrolls (NFP), and subdued personal spending contributed to market unease.
- The January FOMC minutes reflected a cautious stance by the Fed, emphasizing the need for further progress on inflation before adjusting rates, given the economy remains close to maximum employment. While employment and PCE data remained robust, personal spending showed signs of weakness, declining unexpectedly by 0.2% m/m—missing the consensus forecast of a 0.1% increase. This marked the first drop since March 2023.
- Additionally, tariffs (25% on imports from Mexico and Canada, and a doubled 10% tariff on China) and stricter immigration and border policies could weigh on GDP growth—projected to slow to 1.8% in 2025 from 2.7% in 2024—while simultaneously driving inflation higher. The mixed effects of these policies, coupled with inconclusive economic data, are expected to sustain market volatility. The benchmark UST 2-year, 10-year, and 30-year yields ended the month at 3.99% (-21bps), 4.21% (-33bps), and 4.49% (-30bps), respectively.
- Domestically, Malaysian Government Securities (MGS) yields remained stable in February, declining slightly by 1–2bps across the curve, reflecting movements in US Treasuries. The 3-year, 10-year, and 30-year MGS ended the month at 3.45% (-1bps), 3.79% (-2bps), and 4.18% (unchanged), respectively.
- Malaysia's GDP grew by a robust 5.1% in 2024, rebounding from 3.6% in 2023. The economy expanded by 5.0% in Q4 2024, surpassing the preliminary estimate of 4.8%, driven by resilient household consumption and net exports. Growth is expected to moderate in 2025 amid global uncertainties, including risks of a renewed trade war disrupting supply chains. Nevertheless, Malaysia's strong private consumption is expected to sustain economic stability and growth. The labor market remained resilient, with the unemployment rate falling to 3.1%, the lowest level since May 2015. Inflation stayed moderate in January, with headline and core CPI at 1.7% and 1.8% year-on-year, respectively (December: 1.7% y/y and 1.6% y/y).

STRATEGY:

- The portfolio remains diversified, with ongoing efforts to increase foreign bond allocations. In January 2025, the fund has generated +1.6% return. Despite recent volatility in rates, credits remain supported as all in yields are high, and we expect bulk of the return to be derived from carry this year. Currently, the portfolio yield is at 5%, with approximately 3% held in cash. In January, portfolio duration was at 5 years as the portfolio actively participated in primary issuances. The portfolio maintained open position in AUD of 5%, with the view that AUDMYR will likely trade in the range of 2.72 to 2.95. The portfolio continues to see attractive opportunities in foreign bonds and aims to further increase exposure in these spaces (USD -target allocation: 55-60%; AUD -target allocation: 15-18%), while MYR allocation is currently at 20%.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
