FUND MANAGER'S COMMENT

Déjà vu moment in current strong market rally as compared to 2025 where macro event developments from US-Iran conflict gathered less market concerns albeit some sharp swings in the oil price and long-term government bond yields. The current market rally was fuelled by both stronger earnings and market FOMO sentiment which was very concentrated in both existing and new areas of AI supply chain within the IT sector ranging from CPU, optic networking, memory, and electronic components. Handful of electrification companies within the Industrial sector underperformed even though they are the AI beneficiary. While we acknowledge that investors could get more cautious of potential near-term tactical corrections with more rallies implying lesser rooms of errors to meet investors' expectations, we believe that the structural trend is stronger with updates from Alphabet I/O keynote event and Nvidia GTC Taipei event. Going forward, we would closely navigate the upcoming IPO events by SpaceX, Anthropic and OpenAI for both opportunities and risk management given this amount of mega-cap IPOs would be unprecedented and might lead to potential massive liquidity movement due to index rebalancing. MYR Class A deliver strong +8.41 outperform DJIDEV by 102bps. While has been rough to keep up with the YTD market performance and May to be the first month in 2026 for GSSE to deliver the outperformance, we are glad about the latest changes made and hopeful to continue delivering strong performance with the belief that AI structural trend remains however this time with the transition into inferencing and agentic stage.

By region, our overweight in Japan fully contributed to the outperformance with selection and allocation to be positive. Asia Pacific was the best performing market followed by North America and Europe. Out allocation from Europe to Asia Pacific helped the fund performance meaningfully as we identified higher conviction opportunities that would benefit from AI and less impacted by oil price. By sector, strong allocation and selection in IT were the main contributor to the outperformance while offset by overweight in Industrials.

The top contributors to the relative performance were Murata Manufacturing and Palo Alto Networks. Supply chain for AI compute is very broad within the IT space including but not limited to GPU, CPU, optic networking, memory, and electronic components. In 2Q26, investors' attention started to shift more towards one of the new areas which is the electronic components including multilayer capacitor component (MLCC) as AI value chain beneficiary where Murata has the market leadership alongside Samsung Electro-Mechanics. In the latest quarterly earnings, Murata suggested +85-90% yoy growth in server related MLCC in which we believe still has the opportunity for upward revision. More importantly, the close to 100% utilization rate across all MLCC companies suggested tighter bottleneck which sparked narratives around pricing boost across both AI and non-AI related MLCC despite Japanese MLCC companies reiterating reluctance on additional rounds of price revision in 2026. Palo Alto Networks enjoyed a strong rally with very positive read thru from its firewall peer Fortinet which reported a strong wave of firewall product renewal. In addition, the recovery of software space with both better earnings, pick up in AI contribution and short coverings helped to support share price of Palo Alto Networks. On the other hand, the bottom contributors to the relative performance were Alphabet and Johnson Control. Alphabet conducted I/O keynote event where Co unveiled new model update, agentic applications and smart glasses failed to impress investors to urgently deploy more capital into investing Alphabet which have done considerably well YTD among the other Mag-7 companies. Similarly to Johnson Control which HVAC system is positioned to benefit from more AI spending, the lack of near-term update excitement resulted in underperformance. Non-holdings such as SK Hynix, Samsung Electronics and Advanced Micro Devices were major relative performance drag.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.
Country risk	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
Reclassification of Shariah Compliance Status	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.

RISKS (CONTINUED)	
Currency Risk	As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency. In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.
Default Risk	Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.
