FUND MANAGER'S COMMENTS

The war's impact on energy logistics and key infrastructure had triggered a historic energy supply shock. Market narrative has pivoted from "soft landing" to "stagflation" anxiety as major central banks had collectively lowering rate-cut expectations amid deepening fiscal risk. Major central banks i.e. US Federal Reserve (Fed), European Central Bank (ECB), and Bank of England (BOE) have pivoted towards "wait-and-see" approach, tempering down potential aggressive rate cuts amid subdued economic growth and potential upside risk to inflation outlook.

As market expectations shifted towards a sticky policy rate environment, US Fed likely to ease policy rate at a lesser quantum in 2H26 amid improving labour market and higher inflationary expectations. U.S. Treasury (UST) yields were little changed over the month, with 10- and 20 years UST yields settling at 4.36% and 4.93%, respectively relative to 4.32% and 4.91% a month prior. UST are anticipated to stay range-bound in near term as jobless claims data suggesting contained layoffs with outgoing Fed Chair Jerome Powell to handover to president-elect Kevin Warsh mid-May which likely to maintain Fed independence from overarching Trump's executive powers.

Malaysian sovereign Sukuk yields retraced lower from previous month in March with Malaysian Government Investment Issuance (MGII) benchmark yields falling by circa 4-11 bps across the curve. The 10-years yield declined by 10 bps to 3.55% as of end-April while long-end 20 years yields tumbled to 3.95% from 4.01% a month prior. Foreign demand in local Sukuks saw strong rebound with net foreign inflows of RM 6.1 bn in net inflows in March, the strongest reported inflows since May 2025. Domestic capital markets also reflected strong local institutional support with robust average bid-to-cover of 2.6x in April's (Mar'26: 2.1x) primary auction as Ringgit (MYR) appreciated by 1.8% against the US Dollar (USD) reaching RM 3.95 per USD as of 27 April.

With expectations of higher inflation and increasingly downside risks to domestic growth outlook, we expect OPR to be kept steady at 2.75% through 2026 supported by ample domestic liquidity conditions. Given relative stability in local Sukuk yields, we retained our defensive duration strategy of 4.0 – 5.0 years, with an overweight in high-grade corporate Sukuks with strong credit fundamentals to optimize risk-adjusted returns while prioritizing capital preservation.

RISKS (CONTINUED)

Non-compliance risk

This involves the risk of fraudulent acts or the risk that rules set out in the governing deed or law that govern the target fund's operations or internal policies and procedures are not being complied with (e.g. human and system errors), which may result in loss to the target fund.

The risk is reduced through the establishment and implementation of appropriate compliance guidelines and stringent internal control policies.

Interest rate risk

Investments in debt securities are subject to the risk of profit rate fluctuations. Prices of debt securities will normally move in the opposite direction of interest rates. A rise or fall in interest rates will cause a fall or rise respectively in prices of debt securities. The target fund may experience a capital loss or gain respectively should the debt securities be sold before maturity.

Opus AM adopts a top-down investment approach to ensure a thorough evaluation of macro-economic factors is undertaken in order to form an interest rate view. Opus AM will develop the portfolio maturity structure based on their interest rate view to capitalise on expected movements in interest rates. In addition, it is also intended to have maturity diversification to ensure limited impact on the portfolio value in case of adverse changes in interest rate direction.

Note: The interest rate is a general indicator that will have an impact on the management of funds regardless if the target fund is a Shariah fund or otherwise. All the investments carried out for the target fund are Shariah-compliant.

Equity risk

The target fund is allowed to hold redeemable Sukuk that are convertible into equity. In the event Opus AM chooses to convert the redeemable Sukuk into equity, the target fund will be exposed to equity risk. Equity risk refers to the performance of the equity securities that is much more volatile and difficult to predict as compared to Sukuk. The effect of such volatility and unpredictable performance of the equity securities may have an adverse impact on the target fund's NAV per unit.

However, this risk is limited as Opus AM will sell the said equity within 3 months from the date of conversion.

Concentration risk

The target fund is susceptible to the concentration risk. As the target fund has no limit restriction for money placements or deposits with any single financial institution, there is a possibility that the target fund may be exposed to a single financial institution. The target fund may also be exposed to a single or group issuer limits if the NAV is RM30 million and below.

The concentration risk is managed through the monitoring of credit analysis conducted on financial institutions and issuers.

Liquidity risk

Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volume traded on the market. This risk is more pertinent to Sukuk and Islamic money market instrument of the target fund in view that such investments are generally not as easily liquidated as compared to equities. In the event some of the Sukuks and Islamic money market instruments of the target fund are not actively traded, there is a risk Opus AM may not be able to easily liquidate such investments and as a result, investors may face difficulties in redeeming their units.

RISK (CONTINUED)

Credit and Default risk

This risk can be referred to:

1. Issuer's creditworthiness

This risk is intrinsic with the target fund's investments in Sukuk and refers to the issuer of the Sukuk's creditworthiness and its expected ability to repay debt. Default happens when the issuer is not able to make timely payments of profit on the coupon payment date or principal repayment on the maturity date. If default happens, this will cause a decline in the value of the defaulted Sukuk and subsequently affect the target fund's NAV per unit.

Opus AM minimises the target fund's credit risk by adopting the following:

- Conducting thorough credit analysis before any investment to ascertain the creditworthiness of different issuers; and
 - Diversifying the portfolio by investing in different issuers, if possible.
2. Financial institutions' creditworthiness
- This risk refers to a financial institution that is a party to the trade or placement contract of the target fund, may default in its payment.

Opus AM minimises the target fund's credit and default risk by conducting a thorough credit analysis on the financial institutions' creditworthiness. With regards to the trading of the target fund's Sukuk, the risk is minimised by dealing only with any financial institution via Real Time Electronic Transfer of Funds and Securities ("RENTAS") system.

Inflation/Purchasing Power Risk

Inflation can be described as increases of price level of goods and services and is commonly represented using the consumer price index. High inflation reduces the purchasing power of a fixed sum of money. In an inflationary environment, fixed rate securities are exposed to higher inflation risk than inflation-linked securities.

The investor's investment in the target fund may not grow proportionately to the inflation rate. This will then decrease the investor's purchasing power even though the investment in monetary terms may have increased.
