#### FUND MANAGER'S COMMENTS

In October the fund returned 8.34%, underperforming the benchmark by 215bps. Year to date, the fund has returned 15.58%, underperforming the benchmark return by 1397bps.

The MSCI AC Asia ex Japan Islamic Index rose 9.8% in US\$ terms in October, led by Korea and Taiwan while China lagged. The USD strengthened by 2.1% and the US 10-year bond yields declined by 7bps to end the month at 4.08%. Gold price surged to an all-time high of USD 4,356/oz during the month and copper price rose 4.8%.

The Korean market surged in October, rising 22.3%. The large gains were led by Index heavyweights Samsung and SK Hynix up 25.3% and 55.5% respectively. The tech sector gained renewed momentum as tightness in the AI supply chain increased investors' expectation on revenue growth and margin expansion. Apart from tech, we also saw strong gains in the industrials sector, driven by continued positive outlook in infrastructure spending as well defence. With the strong growth in the Korean market the country weight in the MIASJ Index has risen to 35.5%.

The President of the United States, Donald Trump, visited the region in late October starting with Malaysia then moving on to Japan and ending in South Korea. There were announcements on trade deals as the President made clear efforts in repairing the relationships that were strained after the introduction of tariffs earlier in the year. In Japan he met up with newly elected Prime Minister, Sanae Takaichi, and showed strong support for her and her administration. Lastly, he visited South Korea, where the highly anticipated meeting between him and Xi Jinping took place. Much to investor relief, trade tension between the two countries simmered down, with a trade truce announced.

In October there were inflows into Korea and India. India flows were positive after 3 consecutive months of outflows. Taiwan saw some foreign outflow despite strong market momentum.

In October we diversified out holdings in tech by reducing some of our larger holdings and adding to names that have smaller weights in the portfolio. Our overall weighting in tech remains the same, where we are slightly overweight the sector when compared to the benchmark. Apart from tech we are overweight in Consumer Discretionary, Communication and Healthcare.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or price of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than the base currency of the target fund, any fluctuation in the exchange rate between the base currency of the target fund and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency of the target fund, this will have an adverse effect on the NAV of the target fund in the base currency of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Risks associated with investment in warrants and/or options	There are inherent risks associated with investment in warrants and/or options. The value of warrants and/or options are influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract. Generally, the erosion in value of Shariah-compliant warrants accelerates as it approaches its expiry date. Like securities, Principal will undertake fundamental research and analysis on these instruments with an aim to mitigate its risks.
Credit/Default risk	The target fund will be exposed to a certain degree of credit and default risk of issuers or counterparties when the target fund invests in Sukuk and/or place Islamic deposits. Credit risk relates to the creditworthiness of the securities issuers or counterparties and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers or counterparties may impact the value as well as liquidity of the investments. In the case of rated Sukuk, this may lead to a credit downgrade. Default risk relates to the risk that a securities issuer or counterparty either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investments. This could adversely affect the value of the target fund. Principal aims to mitigate this risk by performing bottom-up and top-down credit research and analysis to determine the creditworthiness of its issuers or counterparties, and impose investment limits on exposures for issuers or counterparties with different credit profiles as a precautionary step to limit any loss that may arise directly or indirectly as a result of a defaulted transaction.

RISKS (CONTINUED)	
Interest rate risk	<p>Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk and Islamic money market instruments. When interest rates rise, Sukuk and Islamic money market instruments' prices generally decline and this may lower the market and Islamic money market instruments. In managing the Sukuk, Principal takes into account the coupon rate and time to maturity of the Sukuk with an aim to mitigate the interest rate risk. As for Islamic money market instruments, the typical tenor of these instruments are less than 12-month maturity and unlike Sukuk, any change to interest rate will only have a minor impact to the prices of these instruments.</p> <p>Note: Please note that although Sukuk is a non-interest bearing instrument, its price movement is correlated to the movement in the interest rates. As such, investment in Sukuk will have an exposure to the movement of the interest rates. Even though the target fund does not invest in interest bearing instruments, the interest rate referred herein is to the general interest rate of the country, which may affect the value of the investment of the target fund.</p>
Risk associated with investing in CIS	<p>Since the target fund may invest into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.</p>
