**FUND MANAGER'S COMMENTS**

In February 2026, the Fund's performance decreased by 0.95%, underperforming the benchmark by 0.52%.

The FBM KLCI fell 1.4% in February due to profit-taking, following the strong 3.6% gain in January. Performance was flat in USD terms, due to the Ringgit strength, but still underperformed MSCI ASEAN's 3.3% gain during the month. Sentiment was mainly dented by geopolitical conflicts in the Middle East, while the 4Q25 reporting season failed excite.

Malaysia's manufacturing sector moderated in February with a PMI reading of 49.3pts, down from a 20-month high of 50.2pts in January, on the back of renewed weakness in output and new orders. According to S&P Global, the drop in total new sales came despite new export orders growing for a second straight month. Purchasing activity rose, but hiring dipped, so did inventory levels. Manufacturers also pointed to further pressure on capacity of suppliers, with lengthening of delivery times for a third straight month. Survey data also showed an increase in input costs, but discounts were offered to sustain demand. Business sentiment eased from January levels, with producers still optimistic of demand recovery for the year ahead. The latest PMI reading suggests GDP growth of just under 5% based on historical comparisons. To recap, Malaysia's GDP grew 6.3% in 4Q25 and 5.2% for the full year 2025, well above economist forecast. Official forecast was 4.0-4.5% for 2026. We expect BNM to stay pat on OPR for the rest of the year at 2.75%. Inflation steady at 1.6% in January, similar to December.

The MGS yield curve closed mixed with 3- and 15-year shifted higher by 1bp while the belly yields declined by 4bps and the long end anchored unchanged in February 2026.

The rise in sovereign yields has led to a tightening in credit spreads. MGS yields increased more prominently at the front to mid-tenor segment, largely tracking the rise in UST yields amid renewed concerns over global inflation. Despite this, credit spreads remain below their long-term averages. Spreads could potentially widen once sovereign yields stabilize at higher levels, as markets adjust to the new rate environment. As such, we remain watchful for potential curve re-pricing.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"><li>• Economic and financial market conditions</li><li>• Political change</li><li>• Broad investor sentiment</li><li>• Movements in interest rate and inflation</li><li>• Currency risks</li></ul> <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<b>Interest rate risk</b>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<b>Liquidity risk</b>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<b>Company or security specific risk</b>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<b>Credit risk</b>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
