FUND MANAGER'S COMMENTS

Market Review

The MGS curve bear flattened in March, with yields rising more at the front and belly (+14–15bps) than the long end (+7–15bps), driven by Middle East tensions lifting inflation concerns and expectations of more hawkish central bank actions.

The increase in sovereign yields has driven a tightening in credit spreads, with MGS yields rising more notably at the front to mid-tenor segment in line with higher UST yields amid ongoing geopolitical tensions. Spreads may widen once sovereign yields stabilize at elevated levels as markets adjust to the new rate environment. In this regard, we remain watchful for potential curve re-pricing.

Outlook & Strategy

BNM maintained the OPR at 2.75% in March, with a neutral tone despite rising external risks. Geopolitical tensions in the Middle East have led to risk-off sentiment, driven by concerns over higher oil prices, inflation, and slower global growth. While subsidy pressures may increase, the government is committed to maintaining RON95 prices. Overall, BNM's outlook remains resilient, premised on the assumptions of slower global growth (+2.7 – 3.2%), the Middle East conflict lasting not more than two months and crude oil prices averaging between USD\$70 – 90/bbl.

We maintain our preference for the credit segment, focusing on high-quality, domestically oriented issuers with strong cash flow visibility, while avoiding companies with exposure to conflict-affected regions. In view of the strong primary pipeline, we will aim to rebalance into new issuances offering yields that better reflect current market conditions.

At the same time, we have modestly increased our allocation to government bonds following the recent correction. We expect government securities to trade in a range given ongoing geopolitical and inflation uncertainties and will continue to adopt a tactical approach while closely monitoring market developments.

Overall, we target a neutral positioning on duration in light of current external uncertainties backdrop to preserve flexibility and manage risk amid heightened volatility.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none">• Economic and financial market conditions• Political change• Broad investor sentiment• Movements in interest rate and inflation• Currency risks <p>Securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the securities of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Interest rate risk	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
Liquidity risk	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
Company or security specific risk	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
Credit risk	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
