FUND MANAGER'S COMMENTS

MARKET REVIEW:

- FBM KLCI remained resilient, closing the month up 1.9%. A key policy development was the launch of the MY Value Up Programme by the Securities Commission Malaysia and Bursa Malaysia, aimed at strengthening corporate performance and improving valuations across the local equity market.
- The initiative mirrors elements of market-wide reform efforts seen in Korea and Singapore, where a stronger focus on governance, capital discipline and shareholder outcomes has supported valuation re-rating and broader investor participation. While voluntary at this stage, the programme targets 88 companies with market capitalisation above RM4 billion, representing approximately 90% of total market value.
- Participating companies are encouraged to set clearer performance targets, articulate strategic priorities, and enhance investor engagement. If adoption gains traction and translates into improved share price performance, this could create a positive spill-over effect across the broader market.

STRATEGY:

- During the period, we strategically increase positions across the majority of portfolio holdings while selectively decreasing the exposure to the Consumer Staples, Healthcare, and Real Estate sector.
- Notable portfolio adjustments included the acquisition of holdings in Farm Fresh Berhad, Fraser & Neave (F&N) Holdings Berhad and Telekom Malaysia Berhad. We also increase our holdings in TIME dotCom Bhd and Petronas Chemicals Group Bhd. On the divestiture side, we are selling names such as AirAsia X Bhd, Gamuda Berhad and Kelington Group Bhd.
- Cash levels were lowered from 22.9% to 15.8% in April.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

| | |
|-------------------------------|--|
| Market risk | Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way. |
| Fund management risk | This risk refers to the day-to-day management of the target fund by AHAM Asset Management Berhad which will impact the performance of the target fund. For example, investment decisions undertaken by AHAM Asset Management Berhad as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund. |
| Performance risk | There is no guarantee in relation to the investment returns. |
| Inflation risk | This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased. |
| Liquidity risk | Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund. |
| Credit/Default risk | Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund. |
| Equity investment risk | This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios. |

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, AHAM Asset Management Berhad will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. AHAM Asset Management Berhad will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, AHAM Asset Management Berhad may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should AHAM Asset Management Berhad decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. AHAM Asset Management Berhad may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
