FUND MANAGER'S COMMENTS

Global market started a new year in 2025 with plentiful events including CES event which managed to boost the AI sentiment albeit then hit by DeepSeek news in the middle of January, Trump inauguration day followed by his rapid changes of tariff implementation plan as well as "big talks" about taking over Canada and Greenland, and higher 10 Y and 30 Y interest rate reflecting a bear steepening yield curve due to expectation of inflation which might force US Federal Reserve to eliminate any rate cut decision for the year. With more inflation data updates and Federal Reserve speakers' commentary, interest rate gradually reversed back to more sensible expectation. Albeit all the headline noises and macro updates, 4 QCY 24 earnings showed that 60 of S&P 500, 25 of STOXX 600, 50 of TOPIX companies which reported have delivered both better sales and earnings beats. We could expect the market performance to continue improving from here assuming that current solid growth trajectory continue throughout through 2025 while acknowledging the elevated volatilities from market headlines. MYR Class A delivered a return of 2.20, underperforming the benchmark by 28 bps as the performance attribution to the allocation was fully offset by the selection.

By region, EU stood out as the best performing market showing some recovery from better than fear earnings result and the low base rate in 2024 while US market has been dragged by the IT pullback due to some AI capex fear. By sector, Healthcare delivered better than fear earnings result which stood out as one of the best performing sectors.

FUND MANAGER'S COMMENTS (CONT')

The top contributors were Boston Scientific and Thermo Fisher Both companies attended JP Morgan Healthcare Conference in the middle of the month and provided some assuring outlook updates which supported investors' confidence Following the conference at the end of the month, Thermo Fisher delivered earnings beats and raise The management highlighted that company would be targeting solid high single digit range earnings growth with the main focus on improving its profitability albeit that growth outlook remains uncertain On the other hand, the top detractors were Tetra Tech and due to not investing in Meta Platforms and Amazon While Tetra Tech had delivered strong quarterly earnings with 10 sales and 6 EPS beat, we observed meaningful multiples de rating which reflect investors' concern around the impact from halting USAID funds and other potential US federal government spending. The selling action was further intensified by its respective volume liquidity.

Impact Focus of the Month

The team added a new position in Broadcom over the month and whilst this is certainly not one of the most impactful holdings the total impact assessment we have made from both its operations and products reaches the threshold set for the Fund Broadcom has technology leadership in networking chips and custom ASICs, and both of these capabilities are being deployed in the AI infrastructure of public cloud companies at an accelerating rate We believe that the market underappreciates from an impact perspective how Broadcom's networking and computing chips support energy efficiency Energy efficient chips are a growing requirement for public cloud datacentres as AI consumes a huge amount of electricity Their AI accelerators will further continue to contribute to society as AI innovation leads to breakthroughs in drug discovery and climate models.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.

RISKS (CONTINUED)

Country risk	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
Reclassification of Shariah Compliance Status	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.
Currency Risk	<p>As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency.</p> <p>In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.</p>
Default Risk	Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.
