FUND MANAGER'S COMMENTS

The Fund delivered 0.26% in September 2025 which was outperforming the benchmark by 3bps and delivered 3.21% in the 12-months period ending 30 September 2025, outperforming the benchmark by 20bps.

BNM held OPR unchanged at 2.75% in its 4 Sep 2025 MPC meeting, viewing the rate appropriate to balance growth with price stability. The statement also adopted a more constructive tone, noting that conclusion of tariff negotiations helped reduce global uncertainty. BNM is expected to adopt a data-dependent approach going forward.

1H2025 GDP grew 4.4%, driven by household consumption, investment and the construction sector, demonstrating Malaysia's resilience amidst global uncertainties, supported by robust domestic demand and structural reforms. This was within revised official projection of 4.0%-4.8% in 2025, though projections have been revised down from earlier forecast of 4.5%-5.5% due to tariffs and trade uncertainties.

In August, headline inflation edged up to 1.3% YoY (July: 1.2%) fueled by growth in restaurants & hotels, food & beverages, insurance & financial services, as well as personal care.

However, it remained below BNM's earlier guidance of between 1.5%-2.3% in 2025 with limited inflationary pressures from global commodity prices. Meanwhile, core inflation also inched higher to 2.3% yoy.

We limit our investment exposure to short-term deposit placements due to the very low risk nature of the Fund.

RISKS

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
General market environment risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Financing risk	This risk occurs when you obtain financing to finance your investment. The inherent risk of investing with money obtained from financing includes you being unable to service the financing payments.
Manager's risk	This risk refers to the day-to-day management of the target fund by Principal which will impact the performance of the target fund, e.g. investment decisions undertaken by Principal as a result of an incorrect view of the market may adversely affect the performance of the target fund.
Reclassification of Shariah non-compliant status risk	This risk refers to the risk that the currently held Shariah-compliant securities in the target fund may be reclassified as Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah adviser, the Shariah boards of the relevant Islamic indices or the Shariah adviser of the issuer.
Credit and default risk	Investment of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal aim to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer. Investment in the target fund is not the same as placing funds in a Shariah-compliant deposit with a licensed Islamic financial institution. There are risks involved and investors should rely on their own evaluation to assess the merits and risks when investing in the target fund.
