FUND MANAGER'S COMMENTS

- Global markets entered June with a sense of relief as geopolitical risks in the Middle East began to ease. Progress toward a US–Iran peace framework, including efforts to keep the Strait of Hormuz open, helped calm concerns over global energy supply disruptions. Brent crude oil retreated sharply from recent highs, easing one of the key pressure points for inflation and global growth.
- The MSCI Asia ex-Japan Index fell 1.50% for the month, but this masked a much stronger first-half performance, with the index still up 25.2% YTD, making Asia the best-performing major equity region. The rally was led by Taiwan and Korea, which gained 59% and 101% YTD respectively, supported by strong investor demand for semiconductors and broader AI supply chain beneficiaries.
- China remained a weak spot. The MSCI China Index fell 7.50% in June, weighed down by softer consumer data and continued rotation away from large internet platforms such as Tencent and Alibaba into semiconductor-related names. While concerns remain around domestic demand, the broader AI theme continues to support pockets of the Chinese technology ecosystem, especially where companies are seen as direct beneficiaries of increased computing demand and semiconductor localisation.
- The structural drivers behind the region's outperformance including AI infrastructure spending, semiconductor demand and improving regional earnings momentum remain intact. However, after such significant gains, markets are likely to become more selective, with investors paying closer attention to valuations and the durability of earnings growth.
- Malaysia underperformed the broader Asian region in June. The FBM KLCI fell 1.13% for the month and ended the first half broadly flat on a YTD basis. Local equities were weighed down by a combination of softer earnings momentum, foreign selling, and political distractions ahead of state elections.
- Sector performance was uneven. Technology stocks initially rebounded alongside the regional rally, supported by renewed investor interest in AI and semiconductor-related names, but later corrected as global tech sentiment weakened. Construction remained supported by Malaysia's data centre investment theme, helped by contract wins and continued institutional interest in industrial and data centre developments.

STRATEGY:

- The fund delivered returns of +2.7% (MYR) in June; outperforming its benchmark, the MSCI AC Asia ex Japan Small Cap index, which declined -0.1% in MYR terms over the same period.
- The funds' relative outperformance was due to our OW in Malaysia small cap Tech positions which extended its gains from the prior month. One of our KR memory equipment position also contributed meaningfully to June's fund performance as Samsung & Hynix remained committed to its future capex plans.
- Other contributors for the month came from our TW position which is also a TSMC capex proxy. Majority of the month's contribution came from our Malaysian positions; including other sectors such as consumer & solar.
- Detractors include a specific TW tech position as rumours of Nvidia delaying its mass production of co-packaged optics (CPO) dragged the whole supply chain. Other laggards include our HK & India pharma positions.
- On a country basis, the fund slightly increased its allocation to Malaysia with 53% exposure; followed by Taiwan & Korea at 18% & 9% respectively.
- The fund took profit on some winners in TW. Cash levels are currently at ~5%.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
