

Sun Life Malaysia Balanced Stable Fund

May 2026

FUND OBJECTIVE

To provide a mixed exposure into equities and bonds, with higher allocation in bonds.

INVESTMENT STRATEGY & APPROACH

The fund will feed into Sun Life Malaysia Growth Fund and Sun Life Malaysia Conservative Fund according to a predefined asset allocation.

The Sun Life Malaysia Growth Fund combines a top down asset and sector allocation process with a bottom-up stock selection process. The asset allocation process is made after a review of macroeconomic trends in Malaysia and for the major economies. In particular, we consider the direction of GDP growth, interest rates, inflation, currencies and government policies. We next assess their impact on the various sectors, together with sector specific parameters to predict any discernible trends or themes. These trends or themes form the basis of our sector selection. Stock selection is based upon improving fundamentals and attractive relative valuations. Rising investor sentiment is an additional criterion. While we use a number of valuation methodologies, the price-earnings ratio is still preferred.

For the Sun Life Malaysia Conservative Fund, the strategy will be reviewed periodically based on the country's economic and bond outlook. We will adopt an active trading strategy and will be especially selective in buying and selling of securities for the Fund. We formulate an interest rate outlook through examining factors such as the Malaysian inflation rate, monetary policies and economic growth. With an interest rate outlook and yield curve analysis, we identify the weighting of the investment tenure and credit rating for the Fund. As part of the risk management strategy, the Fund is constructed and managed within the predetermined guidelines. Essentially, we monitor the bond portfolio according to duration, credit ratings and sector.

FUND DETAILS

Launch Date	20 October 2008	Domicile	Malaysia
Currency	Ringgit Malaysia	Launch Price	RM1.0000
Units in Circulation	0.98 million units	Fund Size	RM1.89 million
Unit NAV	RM1.9222	Performance Benchmark	25% FBM100 + 75% 12 month FD

FUND MANAGER'S COMMENTS

In May 2026, the Fund's performance increased by 0.62%, outperforming the benchmark by 0.79%.

The FBM KLCI fell 2.3% in May. Market sentiment continues to be dictated by the war in the Middle East and consequently its inflationary effects and influence of US fed rate trajectory. Prospects of a US-Iran accord saw energy and broad commodity prices easing notably from recent peaks, but tensions remain.

The KLCI is now trading at a forward PE of under 14.3x, which is below the 10-year historical mean straddling Covid-19, but still over -2SD below the mean of 16x for the 5-year period preceding 2020 – the period which coincided with the last direct investment boom. Consensus now projects earnings growth for FBM30 of c.9% for 2026 and 6% for 2027, with upward revisions in commodity-related names. Sustained strength in domestic investments (both DDI and FDI), fiscal consolidation gathering pace and the strengthening of the Ringgit are factors we see supportive of the further narrowing of risk premiums, and consequently higher valuation multiples.

Malaysia's macro backdrop remains resilient, with BNM holding the OPR at 2.75% in May 2026 amid contained inflation and steady growth, while highlighting external risks from Middle East tensions. Economic growth moderated slightly to 5.4% YoY in 1Q2026 but stayed above expectations, supported by domestic demand and a rebound in exports. Inflation edged up to 1.9% due to higher transport costs, though core inflation eased, giving policymakers flexibility, even as producer prices surged on higher oil prices. While leading indicators showed mild moderation, manufacturing and exports rebounded strongly, reflecting resilient external demand and inventory restocking. On the policy front, fiscal tightening is underway via spending cuts to manage rising subsidies, reinforcing discipline despite ongoing geopolitical and cost pressures.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include: • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.
Interest rate risk	Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.
Liquidity risk	Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.
Company or security specific risk	There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.
Credit risk	Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.
