## FUND MANAGER'S COMMENTS

The US outlook continued to be mired by unresolved federal budget debates and recurring risk of government shutdowns, which may impair data visibility. This is further compounded by the executive encroachment on Fed autonomy further complicating central bank's monetary policy path and its credibility. With outgoing current Fed Chair Jerome Powell in May 2026 and the potential appointment of Trump-friendly Fed Chair, we expect the Fed to deliver up to 50 bps of additional cuts through 2026, with timing and pace contingent upon inflation durability, labour-market softening, and fiscal-driven term-premium dynamics.

Japan's fiscal expansion and monetary tightening cycle has created a feedback loop where massive stimulus spending is triggering JGB selloffs and yen weakness, which in turn could force more aggressive BoJ rate hikes to combat import-led inflation. This tightening threatens global risk assets to potential unwinding of global yen carry trades as cost of funding increases, as reflected in recent capital flight. Furthermore, this tightening could incentivise Japanese investors to repatriate their offshore investments and turn towards higher domestic yields, triggering potential capital flight that could destabilize demand for riskier assets.

On a positive note, Malaysia's growth trajectory is expected to remain resilient albeit slower in 2026, balanced by manageable domestic inflation. We are expecting growth to be within official projection range of 4.0 – 4.5% YoY given external headwinds and high base effect. With neutral tone of BNM MPC's latest monetary meeting, we expect the central bank to maintain OPR steady at 2.75% through 2026. We are however, of the view that BNM could potentially ease with pre-emptive rate cut to OPR should GDP growth falls below the official forecast range.

Domestic sukuk market is expected to exhibit resiliency, underpinned by narrowing yield differentials between the US and Emerging Markets and continuing institutional support. Despite Ringgit's recent appreciation, the underlying currency demand dynamics remain favourable, driven by steady foreign direct inflows from multi-year AI and data centres investment, fiscal consolidation commitments and undemanding local equity valuations.

Given anticipated policy rates to be maintained through 2026 with limited rate cut scenario, the risk-return profile associated with long-duration positioning is muted by constrained capital appreciation, and heavy reliant on income (carry) rather than price gains. As a result, considering the relatively flat yield curve at the longer end and lack of adequate compensation for additional term premia, we have adjusted our duration range to 4.0 – 5.5 years from 4.5 – 6.5 years. We remain our overweight position in high-grade corporate sukuks, trading at a reasonable yield, as part of our strategy to balance risks and returns.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Market risk

The usual risks of investing and participating in listed and unlisted securities apply to an investment in the units. Prices of securities may go up or down in response to changes in economic conditions, profit rates, and the market's perception of securities. These may cause the price of units to go up or down as the price of units is based on the current market value of the investments of the target fund.

### Fund management risk

The performance of the target fund depends on, amongst other things, the experience and expertise of Opus AM. Poor management of the target fund will jeopardise the investment of the target fund and subsequently, may lead to losses to unit holders. The risk is reduced through the following:

- Implementation of a consistent structured investment process; and
- Establishment and implementation of stringent internal policies and procedures.

**RISKS (CONTINUED)**

<p><b>Non-compliance risk</b></p>	<p>This involves the risk of fraudulent acts or the risk that rules set out in the governing deed or law that govern the target fund's operations or internal policies and procedures are not being complied with (e.g. human and system errors), which may result in loss to the target fund.</p> <p>The risk is reduced through the establishment and implementation of appropriate compliance guidelines and stringent internal control policies.</p>
<p><b>Interest rate risk</b></p>	<p>Investments in debt securities are subject to the risk of profit rate fluctuations. Prices of debt securities will normally move in the opposite direction of interest rates. A rise or fall in interest rates will cause a fall or rise respectively in prices of debt securities. The target fund may experience a capital loss or gain respectively should the debt securities be sold before maturity.</p> <p>Opus AM adopts a top-down investment approach to ensure a thorough evaluation of macro-economic factors is undertaken in order to form an interest rate view. Opus AM will develop the portfolio maturity structure based on their interest rate view to capitalise on expected movements in interest rates. In addition, it is also intended to have maturity diversification to ensure limited impact on the portfolio value in case of adverse changes in interest rate direction.</p> <p>Note: The interest rate is a general indicator that will have an impact on the management of funds regardless if the target fund is a Shariah fund or otherwise. All the investments carried out for the target fund are Shariah-compliant.</p>
<p><b>Equity risk</b></p>	<p>The target fund is allowed to hold redeemable Sukuk that are convertible into equity. In the event Opus AM chooses to convert the redeemable Sukuk into equity, the target fund will be exposed to equity risk. Equity risk refers to the performance of the equity securities that is much more volatile and difficult to predict as compared to Sukuk. The effect of such volatility and unpredictable performance of the equity securities may have an adverse impact on the target fund's NAV per unit.</p> <p>However, this risk is limited as Opus AM will sell the said equity within 3 months from the date of conversion.</p>
<p><b>Concentration risk</b></p>	<p>The target fund is susceptible to the concentration risk. As the target fund has no limit restriction for money placements or deposits with any single financial institution, there is a possibility that the target fund may be exposed to a single financial institution. The target fund may also be exposed to a single or group issuer limits if the NAV is RM30 million and below.</p> <p>The concentration risk is managed through the monitoring of credit analysis conducted on financial institutions and issuers.</p>
<p><b>Liquidity risk</b></p>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volume traded on the market. This risk is more pertinent to Sukuk and Islamic money market instrument of the target fund in view that such investments are generally not as easily liquidated as compared to equities. In the event some of the Sukuks and Islamic money market instruments of the target fund are not actively traded, there is a risk Opus AM may not be able to easily liquidate such investments and as a result, investors may face difficulties in redeeming their units.</p>

**RISK (CONTINUED)**

**Credit and Default risk**

This risk can be referred to:

1. Issuer's creditworthiness

This risk is intrinsic with the target fund's investments in Sukuk and refers to the issuer of the Sukuk's creditworthiness and its expected ability to repay debt. Default happens when the issuer is not able to make timely payments of profit on the coupon payment date or principal repayment on the maturity date. If default happens, this will cause a decline in the value of the defaulted Sukuk and subsequently affect the target fund's NAV per unit.

Opus AM minimises the target fund's credit risk by adopting the following:

- Conducting thorough credit analysis before any investment to ascertain the creditworthiness of different issuers; and
  - Diversifying the portfolio by investing in different issuers, if possible.
2. Financial institutions' creditworthiness
- This risk refers to a financial institution that is a party to the trade or placement contract of the target fund, may default in its payment.

Opus AM minimises the target fund's credit and default risk by conducting a thorough credit analysis on the financial institutions' creditworthiness. With regards to the trading of the target fund's Sukuk, the risk is minimised by dealing only with any financial institution via Real Time Electronic Transfer of Funds and Securities ("RENTAS") system.

**Inflation/Purchasing Power Risk**

Inflation can be described as increases of price level of goods and services and is commonly represented using the consumer price index. High inflation reduces the purchasing power of a fixed sum of money. In an inflationary environment, fixed rate securities are exposed to higher inflation risk than inflation-linked securities.

The investor's investment in the target fund may not grow proportionately to the inflation rate. This will then decrease the investor's purchasing power even though the investment in monetary terms may have increased.
