## FUND MANAGER'S COMMENT

Amid the ongoing ceasefire between US and Iran following a month-long conflict, the Q1 earnings season delivered broadly positive results, with the majority of earnings exceeding expectations. This was particularly evident among IT companies and non-IT companies within the AI value chain, which experienced growth acceleration from AI adoption, translating into increased investment spending. Despite elevated crude oil prices remaining above \$100 and exhibiting volatility in response to geopolitical headlines, risk concerns moderated as most markets delivered one of the sharpest V-shaped recoveries in less than a month, reaching new all-time highs. Management teams from earnings calls expressed limited concerns regarding elevated inflation and direct implications from the Strait of Hormuz blockage. We anticipate these effects may emerge with typical lag effects, though they could appear to be temporary based on current Middle East conflict developments. MYR Class A delivered strong +8.67% but still underperformed DJIDEV index benchmark by 173ps in which positive allocation was more than offset by selection.

By region, APAC market demonstrated the strongest performance, with the fund's higher allocation contributing positively to overall performance. The primary drags on relative performance stemmed from security selection in North American and European markets, where Industrial and Healthcare investments in those markets failed to keep pace with the broad market rally. By sector, the overweight position in Healthcare, despite being lower than in previous quarters, was the main contributor to underperformance. Security selection within Industrial and IT sectors was negative, as several fund holdings disappointed in their earnings results. We acknowledge our lack of exposure to market-favored segments during the period, including analog and memory chips, as well as power generation and data center-related Industrial companies while on the other hand we would scrutinize and examine the elevated valuation more closely to have a better risk-reward.

The top contributors to the relative performance were Alphabet and Broadcom. Alphabet distinguished itself among the Magnificent 7 earnings with cloud growth acceleration of 15 percentage points from the previous quarter to +63% year-over-year growth. Its backlog nearly doubled qoq exceeding \$460B highlighting a strong growth outlook. As Following Alphabet's earnings, Broadcom rallied strongly as a value chain beneficiary, helping to design Google TPU chips and announcing a multi-generation partnership with Meta to support their AI compute infrastructure. On the other hand, the bottom contributors to the relative performance were Astrazeneca, Boston Scientific and Gilead – all healthcare sector holdings. Unfavorable market sentiment persisted around defensive sector, specifically healthcare, where companies delivering inline or slightly better-than-expected earnings results experienced disproportionately negative market reactions, significantly underperforming other sectors during the V-shaped market recovery. The fund's lack of exposure to Amazon was also a significant drag on relative performance.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Returns not guaranteed</b>	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
<b>Market risk</b>	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
<b>Inflation risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
<b>Manager's risk</b>	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.
<b>Country risk</b>	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
<b>Reclassification of Shariah Compliance Status</b>	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.

**RISKS (CONTINUED)**

<b>Currency Risk</b>	<p>As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency.</p> <p>In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.</p>
<b>Default Risk</b>	<p>Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected. This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.</p>
