FUND MANAGER'S COMMENTS

- It was a turbulent month in March, as geopolitical tensions flared in the Middle East. The US-Israel and Iran war has now stretched beyond a month with no clear resolution at the time of writing, as both sides continue to exchange hostilities and deadlines for further military action are repeatedly extended.
- In Asia, the MSCI Asia ex-Japan index declined sharply by 14.0% as the region came under pressure from the conflict in the Middle East. Asia's heavy reliance on energy imports amplified the impact, as more than 80% of oil and gas flowing through the Strait of Hormuz is destined for the region.
- Net oil importers such as Indonesia and the Philippines bore the brunt of the sell-off, as governments moved to implement energy curbs to manage supply constraints and rising costs in their countries.
- Technology-heavy markets also weakened, with Taiwan and Korea coming under pressure amid negative sentiment. Concerns emerged following Google's introduction of its "Turbo Quant" optimisation technique, which claims to reduce memory usage by up to 80%, raising questions around future demand for memory chips.

Concerns emerged following Google's introduction of its "Turbo Quant" optimisation technique, which claims to reduce memory usage by up to 80%, raising questions around future demand for memory chips.

STRATEGY:

- The fund delivered returns of -7.2% (MYR) in March; outperforming its benchmark, the MSCI AC Asia ex Japan Small Cap index, which declined -8.7% in MYR terms over the same period.
- The funds' relative outperformance was due to our OW in Malaysia positions as the market benefited from its defensive nature as the index is still mainly dominated by old economy names. It was a risk off environment in March for global markets including EM due to the ongoing war in the Middle East.
- Contributors for the month came from our TW positions which continue to benefit from supply chain tightness for the AI theme & TSMC capex plays. Our Malaysian Oil & Gas and CPO positions also contributed positively as oil prices spiked to >\$100 per barrel in March.
- Detractors mainly came from our Malaysia aviation & material positions as higher global energy prices would ultimately impact upcoming earnings.
- On a country basis, the fund remained anchored in Malaysia with 40% exposure; followed Taiwan at 13% & Korea, China at 10% each respectively.
- The fund marginally raised cash levels to 13% as a temporary defensive measure in light of recent events in the Middle East.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
