

Sun Life Malaysia Balanced Aggressive Fund

January 2026

FUND OBJECTIVE

To provide a mixed exposure into equities and bonds, with higher allocation into equities.

INVESTMENT STRATEGY & APPROACH

The fund will feed into Sun Life Malaysia a Growth Fund and Sun Life Malaysia Conservative Fund according to a predefined asset allocation.

The Sun Life Malaysia Growth Fund combines a top down asset and sector allocation process with a bottom-up stock selection process. The asset allocation process is made after a review of macroeconomic trends in Malaysia and for the major economies. In particular, we consider the direction of GDP growth, interest rates, inflation, currencies and government policies. We next assess their impact on the various sectors, together with sector specific parameters to predict any discernible trends or themes. These trends or themes form the basis of our sector selection. Stock selection is based upon improving fundamentals and attractive relative valuations. Rising investor sentiment is an additional criteria. While we use a number of valuation methodologies, the price-earnings ratio is still preferred.

For the Sun Life Malaysia Conservative Fund, the strategy will be reviewed periodically based on the country's economic and bond outlook. We will adopt an active trading strategy and will be especially selective in buying and selling of securities for the Fund. We formulate an interest rate outlook through examining factors such as the Malaysian inflation rate, monetary policies and economic growth. With an interest rate outlook and yield curve analysis, we identify the weighting of the investment tenure and credit rating for the Fund. As part of the risk management strategy, the Fund is constructed and managed within the predetermined guidelines. Essentially, we monitor the bond portfolio according to duration, credit ratings and sector.

FUND DETAILS

Launch Date	20 October 2008	Domicile	Malaysia
Currency	Ringgit Malaysia	Launch Price	RM1.0000
Units in Circulation	2.26 million units	Fund Size	RM6.21 million
Unit NAV	RM2.7462	Performance Benchmark	75% FBM100 + 25% 12 month FD

FUND MANAGER'S COMMENTS

In January 2026, the Fund's performance increased by 0.80%, underperforming the benchmark by 2.06%.

The FBM KLCI rallied a further 3.6% in January following a strong December 2025 on the back of the Ringgit strength. We believe sentiment was largely lifted by improved sentiment on the Ringgit which gained ~3% against the Dollar, exacerbated by the severe underweight position by global funds on Malaysia, coupled with the encouraging 4Q25 GDP reading.

The KLCI is now trading at a forward PE of c.15x, which is at the 10-year historical mean straddling Covid-19, but still over -1.5SD below the mean of 16x for the 5-year period preceding 2020. Consensus now projects earnings growth for FBM30 of c.1% for 2025 and 9% for 2026. Sustained strength in domestic investments (both DDI and FDI), fiscal consolidation gathering pace (in particular, subsidy rationalisation initiatives) and the strengthening of the Ringgit are factors we see supportive of the further narrowing of risk premiums, and consequently higher valuation multiples.

The MGS yield curve saw a modest curve twist in January with front-end yields edging higher, as the 3-7y segment rose by 3 to 6 bps. In contrast, the belly out to 15y saw modest declines of 1 to 3bps suggesting demand for intermediate tenors and limited change in medium term inflation and growth expectations. Slight steepening was seen at the long end likely reflecting supply term premium dynamics with meaningful duration supply during the month. (i.e. 15y MGS new issue and 30y MGII new issue). The 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS closed at 3.11% (+2bps), 3.33% (+3.), 3.45% (+6bps), 3.52% (-1bp), 3.77% (-3bps), 3.93% (+7bps), and 4.02% (+4bp) respectively in January.

BNM is expected to keep the overnight policy rate (OPR) unchanged at 2.75% through most of 2026 amid stable domestic growth and inflation, while global central banks such move toward easing, narrowing yield differentials and enhancing the carry appeal of MYR bonds.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none">• Economic and financial market conditions• Political change• Broad investor sentiment• Movements in interest rate and inflation• Currency risks <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Interest rate risk	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
Liquidity risk	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
Company or security specific risk	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
Credit risk	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
