## FUND MANAGER'S COMMENTS

**Review:** The MSCI AC Asia ex Japan Islamic Index declined 13.7% in US\$ terms in March, marking the worst monthly performance since the Global Financial Crisis. South Korea was the biggest laggard during the month, with the KOSPI falling 24.6% amid concerns on memory pricing and prior overbought positioning. The USD strengthened by 2.41%, while the US 10-year bond yield rose sharply to 4.32%. Gold reversed course, declining 11.6% during the month.

**Fundamentals (Slightly positive):**

Geopolitical tensions dominated markets, following military operations by the US and Israel against Iran that began at the end of February, triggering a sharp spike in energy prices. This created a stagflationary backdrop—higher inflation alongside slowing growth—which weighed heavily on risk assets.

Within the region, performance divergence was largely driven by energy dependence. China (-7.7%) proved relatively resilient due to its diversified energy mix and policy support, including a quality-focused growth strategy under its upcoming five-year plan. In contrast, North Asia (Korea, Taiwan, Japan) and India saw broad-based double-digit declines.

**Technical (Positive):** Foreign investors exited Asian markets aggressively in March, with record outflows from Taiwan (\$29bn), Korea (\$24bn), and India (\$12bn). Southbound flows into China also moderated significantly. Broad-based deleveraging across asset classes drove declines in both risk assets and traditional safe havens.

**Valuation (Neutral):** Valuations corrected meaningfully following the sharp drawdown. Korea now trades at 6.6x forward P/E, significantly below its historical average and global peers (around -2.2 standard deviations). Indonesia and India also moved below historical averages, while China remains broadly in line with its long-term mean. Taiwan continues to trade at a premium relative to history.

**Strategy:** In March we saw a lot of volatility in the markets which affected our portfolio weightings. We reduced our holdings in Korea while largely maintaining our weight in Taiwan. In India, we raised cash as we anticipated higher oil price to significantly impact the economy over the medium term. Taiwan tech is our highest conviction sector as we expect earnings upgrades to continue the back of AI capex.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or price of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than the base currency of the target fund, any fluctuation in the exchange rate between the base currency of the target fund and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency of the target fund, this will have an adverse effect on the NAV of the target fund in the base currency of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Risks associated with investment in warrants and/or options</b>	There are inherent risks associated with investment in warrants and/or options. The value of warrants and/or options are influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract. Generally, the erosion in value of Shariah-compliant warrants accelerates as it approaches its expiry date. Like securities, Principal will undertake fundamental research and analysis on these instruments with an aim to mitigate its risks.
<b>Credit/Default risk</b>	The target fund will be exposed to a certain degree of credit and default risk of issuers or counterparties when the target fund invests in Sukuk and/or place Islamic deposits. Credit risk relates to the creditworthiness of the securities issuers or counterparties and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers or counterparties may impact the value as well as liquidity of the investments. In the case of rated Sukuk, this may lead to a credit downgrade. Default risk relates to the risk that a securities issuer or counterparty either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investments. This could adversely affect the value of the target fund. Principal aims to mitigate this risk by performing bottom-up and top-down credit research and analysis to determine the creditworthiness of its issuers or counterparties, and impose investment limits on exposures for issuers or counterparties with different credit profiles as a precautionary step to limit any loss that may arise directly or indirectly as a result of a defaulted transaction.

**RISKS (CONTINUED)**

**Interest rate risk**

Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk and Islamic money market instruments. When interest rates rise, Sukuk and Islamic money market instruments' prices generally decline and this may lower the market and Islamic money market instruments. In managing the Sukuk, Principal takes into account the coupon rate and time to maturity of the Sukuk with an aim to mitigate the interest rate risk. As for Islamic money market instruments, the typical tenor of these instruments are less than 12-month maturity and unlike Sukuk, any change to interest rate will only have a minor impact to the prices of these instruments.

Note: Please note that although Sukuk is a non-interest bearing instrument, its price movement is correlated to the movement in the interest rates. As such, investment in Sukuk will have an exposure to the movement of the interest rates. Even though the target fund does not invest in interest bearing instruments, the interest rate referred herein is to the general interest rate of the country, which may affect the value of the investment of the target fund.

**Risk associated with investing in CIS**

Since the target fund may invest into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.
