FUND MANAGER'S COMMENTS

As we concluded the first quarter of 2025, the underperformance of US equity market was mainly attributed to concerns surrounding recession risk driven by heightened uncertainties related to tariff. We believe that market expectation for more rate cuts may prove insufficient to support a sustainable market recovery as evidenced by the short-lived recovery in mid-March. Therefore, we anticipate further insights from company management regarding potential tariff impacts, latest business strategies and corresponding mitigation measures during the upcoming quarterly earnings which are set to begin in mid-April. In addition, market was also more concerned by the tech spending strengths. Accenture latest earnings once again highlighted the downside risks associated with federal spending exposure in the US as DOGE leads federal spending re-evaluation.

By region, underweight in NA and strong selection in each region were major contributors to the relative performance. By sector, outperformance from Consumer Discretionary and Communication was more than offset by no exposures in Energy and Consumer Staples. GSSE with slightly higher cash level has also contributed to the relative performance.

FUND MANAGER'S COMMENTS (CONT')

The top contributors to the relative performance were United Health Group and Waste Management. Both companies operate a business that is relatively more defensive which investors consider as a safer haven for diversification in a volatile market environment. The top detractors to the relative performance were Novo Nordisk and Adobe. Novo Nordisk failed to deliver better weight loss with Cagrisema REDEFINE-2 trial after REDEFINE-1 trial disappointment in December 2024. There were also concerns about the side effects given that number of people taking high dose was lower. Nevertheless, we view Novo Nordisk as oversold opportunity for the obesity drug total addressable market of ~\$100B but we would also await for better trial result, communication and execution by the management to have better conviction. While Adobe earnings update suggests that Co is on track to achieve FY guidance, investors were not impressed by the lack of successful AI monetization especially under an uncertain macro environment.

Impact Focus of the Month

The team having been engaging with Broadcom, pushing the company to make more disclosures around their approach to AI. Whilst the company does not develop any AI software internally, they are the second largest supplier of AI chips to train AI models behind only NVIDIA. We were pleased to see in their recently published 2024 Corporate Responsibility Report that Broadcom have not included a section new to this year's report entitled "Responsible use of AI". In it, they stated that according to their Generative AI Policy, all uses of generative AI must be reviewed by a cross-functional team of leaders from various teams including security, privacy, legal, business management and other domains. We will continue to engage with Broadcom and other companies within the space to encourage them to put in place appropriate safeguards such as this to support lowering the risk that AI is misused. We expect more technology companies to begin addressing this topic more formally in the future.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.

RISKS (CONTINUED)

Country risk	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
Reclassification of Shariah Compliance Status	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.
Currency Risk	<p>As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency.</p> <p>In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.</p>
Default Risk	Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.
