

Sun Life Malaysia

Balanced Stable Fund

March 2025

FUND OBJECTIVE

To provide a mixed exposure into equities and bonds, with higher allocation in bonds.

INVESTMENT STRATEGY & APPROACH

The fund will feed into Sun Life Malaysia Growth Fund and Sun Life Malaysia Conservative Fund according to a predefined asset allocation.

The Sun Life Malaysia Growth Fund combines a top down asset and sector allocation process with a bottom-up stock selection process. The asset allocation process is made after a review of macroeconomic trends in Malaysia and for the major economies. In particular, we consider the direction of GDP growth, interest rates, inflation, currencies and government policies. We next assess their impact on the various sectors, together with sector specific parameters to predict any discernible trends or themes. These trends or themes form the basis of our sector selection. Stock selection is based upon improving fundamentals and attractive relative valuations. Rising investor sentiment is an additional criterion. While we use a number of valuation methodologies, the price-earnings ratio is still preferred.

For the Sun Life Malaysia Conservative Fund, the strategy will be reviewed periodically based on the country's economic and bond outlook. We will adopt an active trading strategy and will be especially selective in buying and selling of securities for the Fund. We formulate an interest rate outlook through examining factors such as the Malaysian inflation rate, monetary policies and economic growth. With an interest rate outlook and yield curve analysis, we identify the weighting of the investment tenure and credit rating for the Fund. As part of the risk management strategy, the Fund is constructed and managed within the predetermined guidelines. Essentially, we monitor the bond portfolio according to duration, credit ratings and sector.

FUND DETAILS

Launch Date	20 October 2008	Domicile	Malaysia
Currency	Ringgit Malaysia	Launch Price	RM1.0000
Units in Circulation	1.10 million units (28 March 2025)	Fund Size	RM2.01 million (28 March 2025)

FUND MANAGER'S COMMENTS

In March 2025, the Fund's performance decreased by 0.09%, outperforming the benchmark by 0.61%.

The KLCI was down 3.9% (-3.3% in USD terms) and underperformed MSCI ASEAN's +1% in March 2025. Aside from the risk aversion surrounding impending Trump tariff measures and recession fears re-emerging in the US, the index was also weighed down by many heavyweights going ex-dividend during the month and ROI harvesting activities by domestic institutions. Almost all sectors were in the red with top laggards being Telcos, Financials and Healthcare.

Malaysia's manufacturing sector moderated in March after a notable improvement in February, with a PMI reading of 48.8pts vs 49.7pts. S&P Global stated that firms remained under pressure at the end of the 1Q, with broad-based weakness seen. New export orders, output, employment and inventory levels eased, with some evidence suggesting that global trade uncertainty had affected international demand. Business confidence, after hitting the highest since October 2024 in February, also waned. That said, the latest PMI data still suggests modest growth in GDP for 1Q25, sustaining the trend seen in 2H24. To recap, Malaysia's GDP grew by 5% in 4Q24 and 5.1% for 2024. BNM maintained its GDP growth forecast of 4.5-5.5% in 2025 during the recent briefing but highlighted potential risk to growth due to the trade restrictions.

The local government bonds market rallied in March, following a steepening trend in the US Treasuries as the market began pricing in the potential impacts from the retaliatory tariffs which could result in slower global growth. The MGS yield curve steepened mildly with the 3y moving lower by -5 bps, while the 10y and 30y adjusted lower by only -2bps. The 3-, 5-, 7-, 10-, 15-, 20- and 30-year benchmarks closed at 3.45% (-5bps), 3.60% (-3bps), 3.71% (-3bps), 3.80% (-2bps), 3.93% (-5bps), 4.01% (-6bps) and 4.18% (-2bps), respectively in March.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Interest rate risk	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
Liquidity risk	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
Company or security specific risk	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
Credit risk	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
